Summary

I'm a Senior Associate Consultant at Infosys, specializing in DevSecOps and cloud automation. I design and build secure, scalable CI/CD pipelines using Azure DevOps and Terraform, enabling reliable cloud infrastructure provisioning while reducing manual effort and deployment risk.

Much of my work centers on Kubernetes and Red Hat OpenShift, orchestrating containerized workloads, managing deployments, and building resilient infrastructure, alongside Docker, Infrastructure as Code (IaC), and AWS, all with a strong focus on security-by-design. At Infosys, I collaborate with cross-functional teams to implement DevSecOps practices including vulnerability scanning, automated patch management, and secure pipeline integrations.

Beyond core DevOps, I'm actively exploring the intersection of AI and infrastructure, building agentic AI systems and LLM-powered tooling, and thinking through how to make software AI-native. My core strengths include OpenShift, Kubernetes, Docker, Terraform, Azure, cloud networking, and automation.

Top Skills

OpenShift • DevSecOps • Azure • Kubernetes • Docker • Linux

Experience

Infosys

Senior Associate Consultant

March 2025 - Present (1 year 5 months)

- Administer and scale Red Hat OpenShift clusters supporting enterprise containerized workloads, managing projects, deployments, RBAC, and pod/node lifecycle to deliver resilient production environments.
- Managed application deployments and rolling updates on OpenShift using Deployments, Routes, and Helm charts, reducing failed production releases by ~60% and shortening lead time for changes by ~70% through automated rollout and rollback strategies.
- Enforced DevSecOps practices on OpenShift and Azure, including image vulnerability scanning, Security Context Constraints (SCCs), and automated patch management, surfacing security issues earlier and decreasing security regressions and high-severity findings by ~70% before release.
- Managed IaC and configuration orchestration with Terraform and Ansible across OpenShift, Azure, and hybrid cloud environments, achieving >95% environment parity between staging and production and enabling reproducible, auditable deployments.
- Engineered observability and alerting for OpenShift and Azure workloads using Azure Monitor, Azure Monitor Agent (AMA), and KQL, building dashboards and refining alerts to reduce mean time to detect/repair (MTTD/MTTR) by ~40% and cut noisy alerts by ~50%.
- Automated Active Directory (AD) integration for Linux nodes underpinning the OpenShift platform (SSSD/realmd/pam plus Kerberos) using Ansible playbooks, reducing user onboarding

from days to under an hour and lowering password-related helpdesk tickets by ~70%.

- Hardened and tuned the underlying Linux infrastructure (RHEL, Ubuntu, CentOS) supporting OpenShift and other production services, applying CIS-based hardening and kernel/security configs to achieve 99.9% availability for critical workloads.
- Improved incident outcomes and platform reliability by instituting runbooks, automated health checks, and post-incident RCA for OpenShift and cloud services, reducing recurrence of similar incidents by ~60% and shortening resolution time by ~45%.

VHR Solutions (Kyndryl)

Automation Engineer

October 2023 - March 2025 (1 year 6 months)

- Developed and maintained Ansible playbooks to streamline system updates (CentOS to RHEL migrations), user account management, and security tool integrations (CrowdStrike, QRadar).
- Automated routine Linux administrative tasks for over 8000+ servers using Ansible, including patch management, pre-checks, and storage snapshots, reducing manual effort.
- Monitored system performance and OS issues using Nagios and Grafana, providing timely resolution for critical production systems.
- Collaborated with cross-functional teams to implement change management in Jira and ensure consistent, automated delivery of infrastructure changes.
- Played a key role in disaster recovery (DR) planning by automating data backup and recovery processes, ensuring business continuity.

Paytm

Software Engineer

January 2021 - October 2023 (2 years 10 months)

- Gained foundational experience in container management, deploying and managing applications with Docker and Kubernetes.
- Troubleshoot complex hardware, software, and network connectivity issues.
- Managed and configured Linux environments (CentOS, Ubuntu, Red Hat) and VMware vSphere infrastructure.
- Installed, configured, and maintained VMware High Availability (HA) and Virtual SAN (vSAN) solutions.
- Administered user accounts, groups, and permissions, and implemented data backup and recovery systems.

Education

Manipal University Jaipur

Bachelor of Technology, Computer Engineering · (August 2016 - November 2020)
